---

FOR INFORMATION ONLY, the Department of Public Works is seeking highly qualified firm(s) that offers the technical expertise and depth to assist in the successful project delivery of five sewer improvement projects.

The proposed improvements will address the capacity and operational deficiencies under the existing conditions for the said five (5) areas. The majority of the sewer systems were constructed with 6" minimum diameter instead of the City's current minimum standard 8-inches in diameter. Other locations require upsizing from 8" in diameter to 12", and from 12" & 15" to 18". Implementation of this program will improve the overall performance, reduce maintenance costs, ensure capacity for future developments, and maintain the reliability of the sewer system. This program will also include improvements to the existing driveway approaches, sidewalks, curbs, curb & gutter, street, ADA access ramps, etc.

The Request for Proposals' (RFP) scope of services include, but are not limited to the following: (1) Cost effective sanitary sewer design and different alternatives, all conforming with the Central Anaheim Master Plan of Sanitary Sewers (CAMPSS); (2) Relative feasibility studies, research, field studies and surveys, flow monitoring, incorporation of best management practices and Preliminary Design Report (PDR); (3) Quality Control and Quality Assurance plan; (4) management data files in a form usable by the City of Anaheim; (5) hard copies of the report that meet the City requirements; and (6) on-going support as needed by City staff. Details for these RFP can be accessed in the City's bidding portal, with link provided herein.
