

**RULE NO. 29**

**GREEN POWER ADJUSTMENT**

**A. GENERAL**

The Anaheim Public Utilities Department's (Department) green power program provides the Department's electric customers the option to pay an additional charge on their bills that shall be dedicated to the procurement and production of electricity from clean, renewable generation sources such as solar, wind, hydropower, biomass, and geothermal. The intent of the green power program is to increase the proportion of renewable generation in Anaheim's power resource portfolio.

The green power program gives customers the choice to pay an additional fee/charge for energy from green power sources; the funds collected shall be dedicated to the purchase of green power (Green Power Program). The Department shall collect these funds in a separate revenue account for use in purchasing the green power on the wholesale market and delivering it to the Anaheim system. The Department shall also determine the mix of available green power. The premium that customers shall pay for the green power is \$0.02 per kilowatt-hour purchased. The total amount of funds collected shall determine the amount of green power purchased by the Department.

Customers who contribute to the Green Power Program shall not receive electrical energy from a specific renewable resource delivered directly to their premises. Rather, by choosing this program, the customer elects to fund the purchase of a particular level of renewable electrical energy to be added to the Department's overall system.

This Rule sets forth the terms and conditions under which the Department shall collect green power funds from customers.

**B. TERMS OF THE AGREEMENT**

Participation in the Green Power Program is voluntary.

The Green Power Adjustment shall be in addition to, not in lieu of, a customer's regular billing under the Electric Rates, Rules and Regulations.

Customers must enroll in the Green Power Program through the Department Customer Service Division as a condition of participation in the Green Power Program offered pursuant to this Rule and must commit to the payment of the Green Power Adjustment on their utility bill. The customer must notify the Department in writing to cancel participation in the Green Power Program.

The Green Power Adjustment shall appear as a separate line item on the customer's bill.

**C. TERMINATION OF BILLING CHARGE**

Once instituted, the customer must notify the Department in writing of the customer's termination of future contributions to the Green Power Program. Discontinuation of the charge shall be effective with the next scheduled billing cycle.

The funds collected for the Green Power Program shall be maintained in a separate Utilities account and be used only for the purchase of renewable power in furtherance of the Green Power Program.
