

FOR YOUR BUSINESS

Heat Pump Incentives Program

For efficient, cost-effective heating and air conditioning

Clean, safe, efficient heat pumps provide cost effective air conditioning in Southern California's climate. They also save space because one unit handles both heating and cooling. We will help you determine if this technology is a wise choice for your business. If it is, we will also offer you a rebate on the purchase and installation of your new heat pump.

How the Program Works

1. Contact us to discuss the practicality of this technology for your air conditioning, heating and water heating. Our discussion will cover size and installation requirements, and the cost and benefits.
2. If you decide to install a heat pump, we will calculate and issue a pre-approved commitment for a rebate amount.
3. You purchase your heat pump from the vendor of your choice and have it installed.
4. Our representative will come to your site to verify the installation.
5. You will receive your rebate check within 6 weeks of the post installation inspection and our receipt of your paid itemized invoice.

How Rebates Are Calculated

Rebates are based on heat pump size and efficiency rating.

Sample Rebate Calculations			
SEER*	Incentive	Size	Rebate Amount
14	\$100	4 tons	\$400
15	\$150	4 tons	\$600
16	\$300	4 tons	\$1,200

*Seasonal Energy Efficiency Ratio

The maximum rebate amount per meter, per project is \$50,000.
