

FOR YOUR BUSINESS

New Construction Incentives Program *Helping you offset installation and upgrade costs*

If you are building or renovating commercial, industrial or institutional facilities, bring us on board early in the design phase. Our experts can help you plan an energy-efficient facility to meet or exceed California Title 24 standards and reduce future operating costs. We will even show you how to qualify for incentives to offset installation and upgrade costs.

How the Program Works

1. Contact us to set up the initial consultation.
2. Working closely with your architect, design team and builder, we will contribute up to \$15,000 for design assistance to find the most cost-effective, energy-efficient options for your business.
3. Once your project is complete, we will perform an inspection to verify the energy-saving achievements you have made beyond Title 24 standards.
4. You will receive your rebate check within 6 weeks of the inspection and our receipt of a copy of your paid itemized invoices.

How Rebates are Calculated

The table at the right shows the maximum rebate per projected kilowatt saved for each eligible measure. * Title 24 and industry standards will be used to calculate your kilowatt savings.

Total rebates can be up to \$50,000 per measure and \$200,000 per facility.

***Exception:** For each measure, the rebate cannot exceed the cost of the upgrade. The cost of the upgrade is defined as the difference between the cost to install an item that meets Title 24 standards and the cost to install an item that exceeds the standards. If the rebate amount calculated from the figure in the table is more than the cost of the upgrade, the rebate will be recalculated at 80 percent of the cost of the upgrade, up to the maximums of \$50,000 per measure and \$200,000 per facility.

MEASURE	\$0.15/kWH OR REBATE (PER KW)
Lighting	\$400
Building Envelope	\$400
Mechanical	\$400
