

## A Guide to Anaheim's Power Content Label

### Column A (Energy Resources)

This column lists the different energy resources that can be used to generate electricity, including eligible renewable resources and other resources.

### Column B (Power Mix)

This column displays the actual mix of electricity purchased by Anaheim per product offering in a given year, broken out by resource type.

### Column C (Green Power Mix)

This column displays the actual mix of electricity purchased by Anaheim per product offering in a given year, broken out by resource type, to meet the energy needs of residents who voluntarily selected to participate in the Green Power Program.

### Column D (California Power Mix)

This column displays the mix of resources used in California for a given year. This information is provided as a reference point for you to compare Anaheim's resource mix to the overall resource mix of the state.

<sup>1</sup> Annual levels of renewables procurement vary from year to year, and are not necessarily representative of the utility's compliance status with the State's Renewables Portfolio Standard (RPS) Program.

<sup>2</sup> Label does not include approximately 48,000 MWhs (~2%) of solar electricity generated from customer rooftop installations.

<sup>3</sup> "Unspecified sources of power" means electricity from transactions that are not traceable to specific generation sources.

<sup>4</sup> Percentages are estimated annually by the California Energy Commission based on the electricity sold to California consumers during the identified year.
